1. (10 points)   Kristin's Question (Again)

For each row below, write the output displayed by the interactive SQL interpreter when the query is executed. If the line would cause an error, write ERROR. Assume that you have started SQLite and executed the following:

```
CREATE TABLE tblA AS
  SELECT 1 AS col1, "A" AS col2 UNION
  SELECT 2, "B";

CREATE TABLE tblB AS
  SELECT 1 AS col1, "Z" AS col2 UNION
  SELECT 2, "Y" UNION
  SELECT 3, "Y";
```

Expression	Output
`SELECT col2 FROM tblB;`	Z Y Y
`SELECT col1 FROM tblA, tblB;`	Error
`SELECT tblA.col1, tblA.col2, tblB.col1, tblB.col2` ` FROM tblA, tblB;`	1|A|1|Z 1|A|2|Y 1|A|3|Y 2|B|1|Z 2|B|2|Y 2|B|3|Y

`SELECT tblA.col1, tblA.col2, tblB.col2`
` FROM tblA, tblB`
` WHERE tblA.col1 = tblB.col1;`
	1|A|Z
	2|B|Y
